

Disclaimer

This method is intended only as an alternative for users who cannot print the Charuco board in a large size.

Accurate alignment is crucial as Charuco calibration relies on detecting corners where black and white squares meet, so the grid must be precise.

Improper assembly or trimming can lead to failed calibration and poor results.

Note: Ensure all pages are printed at the same scale and trimmed accurately.

Assembly Instructions:

- 1. Print only the odd-numbered pages.**
- 2. (Optional) Replace even-numbered black pages with black cardboard or plain black paper.**
- 3. Mount the printed tiles on a thick cardboard backing, following the reference layout.**
