1

Service designer

Service Designer works with client and decides what components will be used in site.

Services designer hands the front-end developer a list of features.

2

Front-end dev

Front-end developer uses Molo Design System to build prototype with required features and functionality.

3

Service designer

Service designers shows prototype to client and client signs off on features and functionality.

4

Visual designer

Visual Designer gets prototype and uses the Molo Design System as guideline to style components based on client requirements. Important here is to not design pages but style components.

7

Service designer

Service designer shows the site to client and gets sign off.

6

Front-end dev

Front-end deve implements the styling.

5

Service designer

Services designer shows the static designs to client and gets sign off.
