

# CT Chest/Abdomen/Pelvis with Contrast — Radiology Report

Patient ID: P001  
DOB: 1972-05-14  
Sex: M  
Accession: ACC-CT-2025-0801-001  
Study Date: 2025-08-01  
Modality: CT  
Referrer: Oncology, LMU  
Report ID: RPT-CT-P001-0801  
Generated: 2025-09-20T20:25:30Z

## Indication

Known prostate carcinoma. Staging assessment prior to therapy escalation.

## Technique

Helical CT from lung apices to symphysis after IV contrast (100 mL).

## Findings

Lungs: No suspicious pulmonary nodules. No pleural effusion.  
Liver, spleen, pancreas: No focal lesions.  
Bones: Sclerotic focus at L4 unchanged from prior outside report.  
Lymph nodes: Right external iliac node enlarged (short axis 12 mm). No retroperitoneal bulky adenopathy.

## Measurements

Lesion	Location	Longest diam (mm)	Prior (mm)
LN-1	Right external iliac	12	—

## Impression

1) Pelvic lymph node (right external iliac) measures 12 mm short-axis. 2) No visceral metastases. 3) Stable sclerotic focus at L4, likely benign. Overall: No definite progression; nodal disease present.
